Face masks help us stay safe

There is a new illness: Coronavirus

There are many different ways to stay safe.
One way is to wear a face mask.
This helps to prevent the spread of germs.

Germs get slowed down by the face mask.
This makes it harder for germs to spread to other people.

When we slow down the spread of germs, more people stay healthy.
I might see a lot of people wearing face masks when I leave the house.
It is different to see people wearing face masks.

I cannot see people smile when they wear a face mask.
That is okay.

I know they are smiling underneath the face mask.
I know that people are helping me to keep healthy.

Everyone is doing their part to stay safe.
